Senior product designer who can also read and write the code. Six years designing workflow-heavy enterprise software, most recently an AI deployment platform, and two consumer products I designed from scratch as sole designer: a WhatsApp-based fitness coach and a food-tracking app that is live on both app stores. I do the research, the Figma and the prototype, and I understand enough React and SwiftUI that engineers get components rather than mockups and nothing gets lost in handoff.

(01) Experience — 2019 - 2026

Runara / Senior Product Designer
JUN 2025 - JUL 2026

AI deployment platform · Enterprise SaaS · San Jose, CA · Hybrid

- Sole designer on a three-person team (me and two engineers) building an AI deployment platform for small teams inside Meta and AMD. Owned the whole loop. Designed and prototyped the system, put it in front of about 100 beta users, iterated on their feedback, then handed validated prototypes to engineering to build to production quality.
- Beta users who were not ML engineers were drowning in deployment metrics, so I worked with the CTO to cut the default view down to the handful they actually used and moved the rest behind search.
- Built the design system in Figma and coded the React (Material UI) components. When reviewing every engineer's UI change against the system became my bottleneck, I encoded the rules and set up an automated check that merges compliant changes and bounces the rest back to the author, with no human in the loop. **Adoption stayed the same, my review time mostly disappeared.**

Iowa State University / Graduate Research Assistant
JAN 2024 - MAY 2025

Product design · Research engagement with Workiva · Ames, IA · On-site

- Led a five-person student team (two designers, three developers) building an anomaly-prediction tool for large datasets used by roughly 50,000 students and staff. Interviewed 15 users, then **cut the most-used workflow from 14 steps to 8.**
- Redesigned the navigation and tested it against the old version with 200+ participants. Task completion up 18%, time-on-task down about a quarter.
- Took the anomaly-prediction model from PRD to shipped alongside the ML team. Designed the review interface and the feedback loop that sent reviewer corrections back into training. **Accuracy went from 67% to 89%**, projected to save the operations team about 2,000 review hours a month.

Alfaleus Technology / Product Designer, Contract
NOV 2022 - MAR 2023

Healthcare · Hyderabad · On-site

- Contract designer on a healthcare app for patients with low vision. Ran usability sessions with 25+ patients and partner staff. The fixes that came out of them cut critical errors 40% and raised task success 25%.
- Designed a WCAG 2.1 AA design system for web and mobile with adjustable contrast, alternative colour scales, filters and zoom built into every screen rather than bolted on afterwards. A post-launch survey scored visual clarity 40% higher than the previous version.

XR Labs / Product Designer
JUN 2019 - AUG 2022

Design & engineering consultancy · Chennai · On-site

- First product design role, on client work for large companies. An MRI training simulator for Philips, a digital-twin system for Capgemini, and a platform for Intel's startup ecosystem, where I wrote the code as well as designing it.
- Across five releases these products reached 10,000+ users. Role-based dashboards and a shorter setup flow cut onboarding time 34%, and A/B-tested checkout flows raised completion 15% and feature adoption 22%.

(02) Building — Alongside full-time work

Sep 2025 - Now

Velotic
Founding designer · AI fitness & nutrition coaching

Prototyped three directions in Claude Code and Bolt. Kept WhatsApp because clients would not move, while coaches were losing check-ins, photos and history in the backlog. Designed a 10-phase coaching flow inside that habit, then reshaped it around how clients already messaged when they pushed back on the first version.

Feb 2026 - Now · Live

Cafe Cal
Sole designer · AI food tracking, App Store & Google Play

Logs a meal from a single photo using Gemini Vision. Three months after launch it had downloads from friends and no paying users, so I threw out the onboarding and redesigned it end to end. **Since that release on 12 August 2026 it has reached 350 paying customers and 150 active trials.**

(03) Education

Iowa State University / M.S. HCI
Aug 2023 - May 2025 · GPA 3.78 / 4.0

SRM Institute of Science & Technology / B.Tech Mechanical
Jul 2015 - May 2019

(04) Toolkit

Figma · Miro · Design systems · Interaction design · Information architecture · Prototyping · Usability testing · WCAG 2.1 AA · User interviews · A/B experiments · PRDs · Roadmapping · WhatsApp Business API · Gemini Vision · OpenAI & Claude APIs · React · TypeScript · SwiftUI · D3 · Recharts · Firebase · Material UI · Claude Code · Cursor · Bolt
